Year

2022

Status

In Stock

Description

Sumo GLS Grassland Subsoiler, 4 Leg Auto reset, 580mm leg spacing, 100-350mm leg depth, flat roller, 1625kg, rigid 2.5m transport width

THE UK'S LEADING GLS GRASSLAND SUBSOILER

- Improving and revitalising compacted grassland that is suffering from the effects of continual heavy machinery, livestock and rainfall is key in growing nutritious animal feed.

- The GLS Grassland Subsoiler is designed to alleviate subsoil compaction by opening the soil profile and improving drainage and airflow without negatively affecting the sward. The drainage helps surface water drain away more quickly while oxygen in the rooting zone has significant impact on plant growth when used in the right conditions.

- The GLS Grassland Subsoiler offers cost savings through labour, fuel, inputs, machine wear and tear, and a better bottom line as a result of improved soil structure and a better grassland environment.

- The GLS can be transformed into an arable low disturbance subsoiler with new legs and points, too. This machine can then be used as a one-pass drill with the addition of seeder and SDO Single Disc Opener accessories – ideal for cover cropping and oil seed rape crop establishment due to the zonal strip-till design.
